GaLaDEKO STIXX

TECHNICAL DATA

DECORATIVE MULCH: FIRE, WEATHER AND ROT RESISTANT

- Combines the advantages of wood and stone mulch
- A mineral coating is available in red (GALA4), brown (GALA7), and slate grey (GALA3). The mineral coating is available natural or «barnwood» colour (GALA1). Other colors can be available upon request (special order).
- Mulch remains stable in shape for years due to mineralization fossilization.
- Proven production method imported from Germany (successfully tested in many countries)

ADVANTAGES OF MINERALIZED MULCH

- Durable and weather-protected (10-year warranty against breakdown)
- No need to renew mulching regularly
- Reduces need for irrigation and weeding
- Low density: ideal for green roofs
- Resistant to fire, fungi and rodents
- Fireproof according to ASTM D2859 and self-extinguishing according to ASTM E648
- Safe for plants
- Available in different colors

INSTALLATION

- Cover bare soil with 7 to 10 cm of mulch. A 50-liter bag covers between 5 and 7 sq. ft.
- Add every 10 years or as needed

ANALYSIS	
Average length of wood chips	30 mm
Bulk Density	275-350 kg/m^3 (for information purposes only)
Composition : Fossilized wood chips / recycled ingredients : NA	

Product is delivered on pallets containing 60 bags of 50 litres. Bulk delivery is also available upon request.
